

Generating EDIFACT CONTRL Messages

Thursday, 08 February 2007

Last Updated Monday, 18 August 2008

EDIReader now supports the automatic generation of EDIFACT CONTRL messages as an optional by-product of parsing EDIFACT interchanges, similar to its support for X12 997s. All of the syntax and version choices, along with the addressing details, are inferred from the original message. All that is necessary is to provide the EDI parser with a `java.io.Writer` object to be used for the generated output.
