

Enhanced support for HIPAA transactions

Wednesday, 30 July 2008

Last Updated Monday, 27 July 2015

A HIPAA module is now available with the commercial version of EDIReader in support of the primary X12 transactions adopted by HIPAA: 270, 271, 275, 276, 277, 278, 820, 834, 835, 837. This module includes the necessary plugins and a special adapter that allow EDIReader to produce an XML expression of a HIPAA EDI transaction that reflects the detailed internal looping structure of the transaction. For example, the output XML for a 270 Eligibility Inquiry shows the 2000A, 2000B, and 2000C loops based on the hierarchical relationships defined by the HL segments within the transaction.
